

Supplementary Information: PRISMA 2020 Checklist

Financial Time-Series Generation: A Systematic Survey of Taxonomy, Evaluation, Datasets, and Open Challenges

Yingxiao Zhang, Jiaxin Duan, Yue Zou, Ke Feng, Jing Xiao

Journal: *npj Artificial Intelligence* | **Manuscript ID:** 5a3d24b0-5398-4e89-835d-34efbe8bd9e3 v2.0

This document provides the completed **PRISMA 2020 (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) Checklist** demonstrating methodological compliance of our systematic survey with established reporting standards.

Section/Topic	Item #	Checklist Item	Location in Manuscript
TITLE	1	Identify the report as a systematic review.	Title page (Title contains “A Systematic Survey”)
ABSTRACT	2	See the PRISMA 2020 for Abstracts checklist. Provide structured/unstructured summary of background, objectives, eligibility criteria, synthesis methods, results, and discussion.	Abstract (single paragraph, 179 words, Page 1)
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of what is already known.	Introduction (Paragraphs 1–3)
Objectives	4	Provide an explicit statement of the questions being addressed with reference to participants, interventions, comparisons, outcomes, and study design.	Introduction (Paragraphs 4–7, Table 1)
METHODS			
Eligibility criteria	5	Specify the inclusion and exclusion criteria for the review and how studies were grouped for the syntheses.	Methods (Inclusion and Exclusion Criteria)
Information sources	6	Specify all databases, registers, websites, organisations, reference lists and other sources searched or consulted.	Methods (Literature Retrieval Strategy)
Search strategy	7	Present the full search strategies for all databases, registers and websites, including any filters and limits used.	Methods (Literature Retrieval Strategy)
Selection process	8	State the processes for deciding which studies were eligible, including how many reviewers screened each record and whether they worked independently.	Methods (Inclusion and Exclusion Criteria, Fig. 2)
Data collection process	9	State the methods of extracting data from reports and how reviewers confirmed data.	Methods (Data Extraction and Coding Protocol)
Data items	10a	List and define all outcomes for which data were sought.	Methods (Data Extraction and Coding Protocol)
	10b	List and define all other variables sought (e.g. participant/intervention characteristics, funding sources).	Methods (Data Extraction and Coding Protocol)
Study risk of bias assessment	11	Specify the methods used to assess risk of bias in the included studies, including details of the tool(s) used.	Methods (Inclusion and Exclusion Criteria, Data Extraction)
Effect measures	12	Specify for each outcome the effect measure(s) used in the synthesis or presentation of results.	Results (Evaluation Protocols subsection)

Section/Topic	Item #	Checklist Item	Location in Manuscript
Synthesis methods	13a–13f	Describe the processes used to decide which studies were eligible for each synthesis, data preparation, tabular display methods, and synthesis of results.	Methods (Review Dimensions and Taxonomy Synthesis, Fig. 2)
Reporting bias assessment	14	Describe any methods used to assess the risk of bias due to missing results in a synthesis.	Results (Practical Issues in Dataset Construction subsection)
Certainty assessment	15	Describe any methods used to assess certainty (or confidence) in the body of evidence for an outcome.	Results (Evaluation Protocols and Unified Checklist)
RESULTS			
Study selection	16a	Describe the results of the search and selection process, from the number of records identified to the number of studies included.	Methods (Figure 2: PRISMA pipeline; Table 2: retrieval stats)
	16b	Cite studies that appeared to meet the inclusion criteria but were excluded, and explain why.	Methods (Table 2 footnote and exclusion list)
Study characteristics	17	Cite each included study and present its characteristics.	Results (Extrapolation, Imputation, Synthesis; Tables 1, 3–6)
Risk of bias in studies	18	Present assessments of risk of bias for each included study.	Results (Practical Issues in Dataset Construction)
Results of individual studies	19	For all outcomes, present for each study summary statistics or findings.	Results (Taxonomy mappings and Comparative Tables)
Results of syntheses	20a–20d	Present the results of the syntheses, including characteristics of included models, cross-paradigm comparisons, and visual representations.	Results (Taxonomy Tree Fig. 3, Task Flow Fig. 4, Comparisons Tables 3–5)
Reporting biases	21	Present assessments of risk of bias due to missing results (survivorship bias, look-ahead bias).	Results (Practical Issues in Dataset Construction)
Certainty of evidence	22	Present assessments of certainty in the body of evidence.	Results (Summarization subsections for each task)
DISCUSSION			
Discussion	23a	Provide a general interpretation of the results in the context of other evidence.	Discussion (Paragraph 1)
	23b	Discuss any limitations of the evidence included in the review.	Discussion (Limitations, practical implications, and concluding outlook)
	23c	Discuss any limitations of the review processes used.	Discussion (Limitations, practical implications, and concluding outlook)
	23d	Discuss implications of the results for practice, policy, and future research.	Discussion (Causal learning, Econometric bounds, Multimodality, Online adaptation)
OTHER INFORMATION			
Registration and protocol	24a–24c	Provide registration information for the review, including register name and registration number, or state that the review was not registered.	Methods (Literature Retrieval Strategy & PRISMA compliance statement)

Section/Topic	Item #	Checklist Item	Location in Manuscript
Support	25	Describe sources of financial or non-financial support for the review, and the role of the funders.	Declarations (Funding statement)
Competing interests	26	Declare any competing interests of review authors.	Declarations (Competing Interests statement)
Availability of data, code	27	Report which of the following are publicly available and where they can be found: data, code, extraction forms, logs.	Declarations (Data Availability and Code Availability statements)
