

One-dimensional / small-scale multivariate time series (e.g., price changes, log returns, and dividend / benefit rates).

Generates data based on historical distributions without reacting to external actions.

1. Capturing Stylized Facts
2. Enable Controllability

Non-interactive

High-frequency, high-resolution limit order book (LOB) data (e.g., batches of cancellations) and individual order flows (buy/sell).

Simulate the virtual market responses to user-injected orders or experimental trading agents.

1. High-frequency non-stationarity
2. Inter-asset correlations
3. Enable Controllability
